FOR THE DEVELOPMENT TEAM · CONFIDENTIAL

Us — production readiness report

What is built and tested, what is blocked on setup, and what must be fixed before a public launch on Google Play (and later the App Store).

App: Us · Flutter · package `com.nammaempire.together` · version 1.0.0+1

Backend: Firebase project `together-48033` · Cloud Functions region `asia-south1` · Agora for calls

Status as of: 23 October 2026

Companion documents: Us · Feature walkthrough (PDF), Us — every screen (PDF), README.md, functions/README.md

1 · SUMMARY

Where the app stands

Verdict: feature-complete in code for Android and well tested, but **not production-ready yet**. Before launch: deploy the server side (Blaze), secure calls with Agora tokens, add push notifications and account deletion, set up release signing and Play Console, and run full QA on real phones. iOS has not been started.

20
user-facing features built

695 / 130 / 48
app / security-rules / server tests — all passing

~73 MB
installed on a 64-bit phone (~33 MB download); was 271 MB

0
analyzer issues · 441 Dart files · ~80.6k lines

✅ Done

- All features in the walkthrough, with Firestore/Storage security rules for every write.
- Server code for ending a pairing and verifying Play purchases (Cloud Functions, tested on the emulator).
- Android release build compiles (first verified 22 Oct 2026); app icon, adaptive/themed icons and splash.
- App size trimmed (unused Agora extensions removed, R8 shrinking, QR model from Play services).
- End-to-end encrypted vault, sign-in protection for recycled numbers, app lock.

⛔ Blocking launch

- Blaze plan + deploy rules and functions (phone sign-in, purchases, pairing deletion depend on it).
- Agora App ID is in the app and calls use no token (security and cost risk).
- No push notifications: calls and messages only arrive while the app is open.
- No in-app account deletion (required by Google Play and Apple).
- Release signing key, privacy policy, Data safety form, Play Console products not set up.
- Not yet QA-tested end to end on real phones.

Feature status

"Done" means built, covered by tests and reviewed in screenshots — every feature still needs QA on real phones before launch.

Feature	Status	What's left
Sign-up: Google, email, mobile OTP	Done	Phone OTP needs Blaze + Play Integrity + SHA keys
Pairing: code, QR, share, by mobile number	Done	—
Home: counter, love taps, moods, daily question	Done	Daily question has rule/time-zone issues (P1)
Chat: media, voice, replies, reactions, pins, search	Done	Media gallery query (P1)
Clear chat · screenshot alerts/blocking	Done	Detection needs Android 14+
Voice and video calls (Agora)	Built · needs fixes	Token, push ringing, foreground service, collisions (P0)
Chat theme · avatars · couple stickers	Done	—
Memories, albums, recaps	Done	—
Calendar with reminders · love notes (sealed)	Done	All-day dates & time zones (P1)
Plans: dates, bucket list, wishlist, places, expenses	Done	—
Music & Watch together (YouTube in-app)	Done	Partner is told only in-app until push exists
Play: 6 games	Done	—
Private vault (E2E encrypted)	Done	Needs device QA (keystore, biometrics)
App lock · sign-in protection	Done	Recovery email link needs App Links (later)
Ending a pairing (14/7 days, leave now)	Built · needs server	Deletion runs in Cloud Functions → needs Blaze deploy
Premium · gifts (Play Billing)	Built · needs server	Needs functions deploy + Play Console products + service account
Memory book PDF	Built · needs server	Credits come from verified purchases
App icon, splash, branding	Done	Check on Android 8–15 devices
Account deletion	Not built	Required by store policy (P0)
Push notifications	Not built	FCM + sending functions (P0)

P0 Launch blockers

Size is a rough estimate: S ≈ under 2 days, M ≈ 3–7 days, L ≈ 1–3 weeks.

Item	What to do	Why it blocks	Size
Deploy the server: Blaze plan, rules, functions	Upgrade Firebase to Blaze; `firebase deploy --only firestore:rules,storage:rules,functions`. Set budget alerts.	Phone OTP, purchases, gifts, books and pairing deletion stay "waiting for the server" until then.	S
Secure calls with Agora tokens	Enable App Certificate; add a callable that checks couple membership and returns a short-lived RTC token; remove the hard-coded App ID (`agora_config.dart:18`, `agora_service.dart:139` joins with an empty token).	Anyone who unpacks the APK can use the Agora minutes or join a call if they learn the channel name.	M
Push notifications (FCM)	Add `firebase_messaging`, save tokens per device, send from functions for calls (high priority), messages, love taps, notes, game invites, pair requests, new-phone checks.	Calls only ring and messages only appear while the partner's app is open.	L
Call reliability	Start calls in a transaction and refuse while busy; check `channelName` in the call screen; keep the permission error visible; reconnect timeout; handle Agora `onError` / `onConnectionStateChanged`; Android foreground service during calls.	Double calls, silent channels, stuck "Reconnecting…", mic cut when leaving the app.	M
Account deletion	In-app "Delete my account" (re-auth, ends pairing, deletes user data and Storage files via a function) plus a web page for deletion requests.	Required by Google Play and Apple; app can be rejected or removed.	M
Release signing	Create the upload keystore and `android/key.properties`; enrol in Play App Signing. Make release builds fail without it (currently falls back to the debug key).	Builds signed with a debug key can't be published or updated.	S
Store listing & policy	Privacy policy and terms URLs (and links in-app), Data safety form, content rating (vault is 18+), screenshots, 512 px icon (in `branding/`).	Required to publish.	S
Play Billing setup	Create products `premium_monthly`, `premium_yearly`, `book_single`, `gift_premium_1m/3m/12m`, `gift_book`; link a service account to the Play Developer API; point RTDN at Pub/Sub topic `play-billing`; test on a licence-tester track.	Purchases can't be verified or granted.	S
Real-device QA	Two phones (Android 10–15, one low-end): every walkthrough flow, calls on mobile data, R8 release build, vault, app lock, screenshots, purchases on test track, pairing end/leave now.	Nothing has been verified end to end on devices yet.	M

P1 High priority (launch week or right after)

Item	Detail	Size
All-day dates and time zones	Birthdays, anniversary, all-day events stored as local midnight (`auth_service.dart:181` , `calendar_event.dart:132`) show a day off across time zones. Store `yyyy-MM-dd` or UTC midnight; migrate.	M
Daily question rules	Day key fixed when the stream starts and uses local date (`daily_question_service.dart:28`); rules let a partner read/overwrite the other's answer (`firestore.rules:403-404`).	S
App Check and invite expiry	Add Firebase App Check (Play Integrity); expire invite codes (`firestore.rules:208-231`).	S
Crash reporting and analytics	Add Crashlytics (keep `build/symbols` from `--split-debug-info`) and basic analytics/funnels.	S
Premium feature gating	Premium can be bought, but no features are locked behind it yet. Decide what Premium unlocks and gate it.	M
Voice note recording	Keeps recording after leaving the chat tab (IndexedStack keeps it alive; `chat_input.dart:84`).	S
Media gallery query	`chat_service.dart:375` uses `limit(1000)` without `orderBy` ; paginate by date.	S
Permissions	Remove `READ_PHONE_STATE` and `READ_MEDIA_IMAGES` if not needed (Play asks for justification).	S
CI and release process	No CI. Add a pipeline: analyze, tests, rules and functions tests, release build; tag releases; keep symbols.	M
Backups and monitoring	Scheduled Firestore exports, Cloud Functions alerting, Firebase budget alerts, Agora usage alerts.	S
Tech debt from the build	Plugins not yet on AGP 9 “built-in Kotlin” (warnings); `android.uniquePackageNames=false` kept for Agora; remove when Agora ships fixed AARs.	S

P2 iOS and later features

iOS item	Detail	Size
iOS project	Add `ios/`, bundle id, Firebase plist, app icons; run on iPhone. Needs Apple Developer account and Xcode.	M
Apple purchases	StoreKit via `in_app_purchase` (client mostly ready) + server verification (App Store Server API, Notifications V2).	M
Sign in with Apple	Required because Google sign-in is offered.	S
Account deletion & privacy labels	Same deletion flow; App Privacy details in App Store Connect.	S
Push & calls	APNs for FCM and phone OTP; CallKit + PushKit (VoIP) so calls ring when the app is closed.	L
Platform differences	Screenshot detection works on all iPhones, but blocking isn't possible (vault warns instead). Face ID usage text; Keychain for vault keys.	S

Later / nice to have

- Printed Memory book delivered to home (Razorpay — allowed for physical goods)
- Netflix/Hotstar "start together" countdown
- Home-screen widget
- Disguised app icon for privacy
- AI features (see ai-features-plan in the project)
- Recovery-email link sign-in (needs App Links)
- Razorpay as an extra option next to Play Billing (India user-choice billing) — only if volume justifies it

Recommended path to launch (Android)

1. Create a staging Firebase project (copy of prod config) for QA.
2. Upgrade both projects to Blaze; set budget alerts.
3. Enable Auth providers: Google, Email, Phone; add SHA-1/SHA-256; enable Play Integrity and App Check.
4. Fix P0 code items: Agora tokens, FCM, call reliability, account deletion; make release builds require the real signing key.
5. Deploy: `firebase deploy --only firestore:rules,storage:rules,functions` (functions README has details).
6. Play Console: app entry, Play App Signing, products, service account, RTDN topic `play-billing`, licence testers.
7. Build: `flutter build appbundle --release --obfuscate --split-debug-info=build/symbols`; keep the symbols.
8. Internal testing track → full QA on two+ real phones (see P0 QA list); fix findings.
9. Store listing: privacy policy, terms, Data safety, content rating, screenshots, icon.
10. Closed testing (Google requires testers for new personal accounts) → production rollout in stages (10% → 50% → 100%) with Crashlytics watched.

Key facts for the team

- **Cloud Functions** (Node 22, TypeScript, `asia-south1`): `processSeparations` (every 15 min), `finalizeSeparation`, `leaveNow`, `endCouple`, `verifyPurchase`, `playBillingNotifications`.
- **Tests:** `flutter test` (695); rules tests in `firestore-tests/` (130, emulator); functions tests in `functions/` (48, emulator).
- **Size controls** live in `android/app/build.gradle.kts` (excluded Agora extensions), `proguard-rules.pro`, and `gradle.properties` (unbundled QR model). Re-check calls after any Agora upgrade.
- **Git:** the latest work (icon, splash, size fix, cleanup) is in the working copy on the Mac and still needs to be committed.

APPENDIX

Code review findings — re-checked 23 Oct 2026

Issues from the 15 Oct review, verified against the current code. All remain open. Paths are under `lib/` unless shown otherwise.

Issue	Where	Status	Priority
Agora App ID hard-coded, no token	`agora_config.dart:18 · agora_service.dart:139`	Open	P0
Calls not tied to a call; no busy check	`call_service.dart:18,38 · call_screen.dart:115-139`	Open	P0
Permission error vanishes	`call_screen.dart:204-205, 120-122`	Open	P0
No foreground service in calls	`android/app/src/main/AndroidManifest.xml`	Open	P0
No push notifications	`pubspec.yaml (no firebase_messaging)`	Open	P0
Dates as local midnight	`auth_service.dart:181 · calendar_event.dart:132 · couple.dart:204`	Open	P1
Voice recording continues off-tab	`main_shell.dart:314-320 · chat_input.dart:84`	Open	P1
“Reconnecting…” forever	`call_screen.dart:242-243`	Open	P0
Agora errors not handled	`agora_service.dart:102-121`	Open	P0
Daily question day key & rules	`daily_question_service.dart:28 · firestore.rules:403-404`	Open	P1
Invites never expire; no App Check	`firestore.rules:208-231`	Open	P1
Release falls back to debug signing	`android/app/build.gradle.kts:59-63`	Open	P0
No account deletion	–	Open	P0
Media gallery limit(1000) no orderBy	`chat_service.dart:375`	Open	P1
Unneeded permissions	`android/app/src/main/AndroidManifest.xml`	Open	P1
No crash reporting / analytics	`pubspec.yaml`	Open	P1
No privacy policy / terms links	`privacy_sheet.dart is an explainer only`	Open	P0
Call doc writable by any member	`firestore.rules:411-416`	Open	P1
